version is available, details below

In the past several years, we have tried several
Solutions to an on going problem we have to deal with
many many times!

**And that is we send lots of E-Mails and at one time
Could send as many as 20,000 per day if we wanted to,
we even made arrangements to have a STATIC IP,
Instead of the traditional dynamic IP,**

**And our Isp was informed what and how we
Operated our Business
Then they were purchased by AT&T
And there began the troubles,**

**A constant blocking of our port 25, misinformed
Customer service reps who swore nothing had changed
In our service!**

**We have changed service several times, looking for a solution,
Tried using our hosting account,
Its limited to about 1500 per day, so no solution there
We tried using the so called anonymous services that hid**

**Your actual ISP, called Proxy software in which delivery comes into play,
Plenty of software
Out there able to do this but we have never found an effective one from a
Desktop application!**

**The next solution would be an Auto-responder which we
Which we have several. But the Expense goes up
With the number of mails in your List and is
Very limited in adding leads created elsewhere**

**And finally we found a Solution, and one that was
So much more than just a solution!**
